

TABLE B.7: CRITICAL VALUES FOR PEARSON'S CORRELATION COEFFICIENT**Using Table B.7**

For any given df , this table shows the values of r corresponding to various levels of probability. The r_{observed} is statistically significant at a given level when it is equal to or greater than the value shown in the table.

Examples:*Nondirectional Hypothesis*

$H_0: \rho = 0$	$H_1: \rho \neq 0$	$\alpha = 0.05, df = 30$
$r_{\text{critical}} = \pm 0.3494$	If $ r_{\text{observed}} \geq r_{\text{critical}} $	then reject H_0

Directional Hypothesis

$H_0: \rho \leq 0$	$H_1: \rho > 0$	$\alpha = 0.05, df = 30$
$r_{\text{critical}} = +0.2960$	If $r_{\text{observed}} \geq r_{\text{critical}}$	then reject H_0
$H_0: \rho \geq 0$	$H_1: \rho < 0$	$\alpha = 0.05, df = 30$
$r_{\text{critical}} = -0.2960$	If $r_{\text{observed}} \leq r_{\text{critical}}$	then reject H_0

Note that the relation between the correlation coefficient and the t -ratio is

$$r_c = \frac{t_c}{\sqrt{(n-2) + t_c^2}}$$

TABLE B.7. Critical Values for Pearson's Correlation Coefficient

Level of Significance of a One-Tailed or Directional Test						
	$H_0: \rho \leq 0$ or $H_0: \rho \geq 0$					
	$\alpha = 0.1$	$\alpha = 0.05$	$\alpha = 0.025$	$\alpha = 0.01$	$\alpha = 0.005$	$\alpha = 0.0005$
Level of Significance of a Two-Tailed or Nondirectional Test						
	$H_0: \rho = 0$					
df	$\alpha = 0.2$	$\alpha = 0.1$	$\alpha = 0.05$	$\alpha = 0.02$	$\alpha = 0.01$	$\alpha = 0.001$
1	0.9511	0.9877	0.9969	0.9995	0.9999	0.9999
2	0.8000	0.9000	0.9500	0.9800	0.9900	0.9990
